

Wind and wave forecasting for the southern North Sea basin

User representative: Deltares

(Deltares Offshore Team: Klaas Jan Bos, [Sofia Caires](#), Niels Jacobsen, Bo Paulsen, Jan-Joost Schouten, Tim Raaijmakers, Hendrik Jan Riezebos, Thijs Robijns, Tom Roetert, Pim van Steijn, Greta van Velzen,...)

Deltares' activities in offshore wind

Hydrodynamics

- **Metocean/environmental conditions (waves, currents, water levels)**
- **Operational forecasting systems (for installation and O&M)**
- **Wave loads / impacts on foundations**

Need for

- **Forecast accuracy** (Reinder)
- **Uncertainty quantification** (Reinder & Anne)
- **Efficient sampling (input reduction) techniques** (Anne)

Geotechnics

- Geotechnical design of foundations (e.g. cyclic liquefaction)
- Pile installation techniques (impact-driving, vibrating)
- Cable burial techniques (jetting, ploughing, trenching, self-burial)
- External threats to electricity cables (anchors, fishnets, objects)

Morphology & morphodynamics

- Offshore geology, seabed characteristics
- Scour and scour protection for all kinds of foundations
- Bed level changes due to morphodynamics (e.g. sand waves)
- Cable routing and site selection in morphodynamic areas

Offshore surveying

- Seismic, sonar and other hydrographic surveys

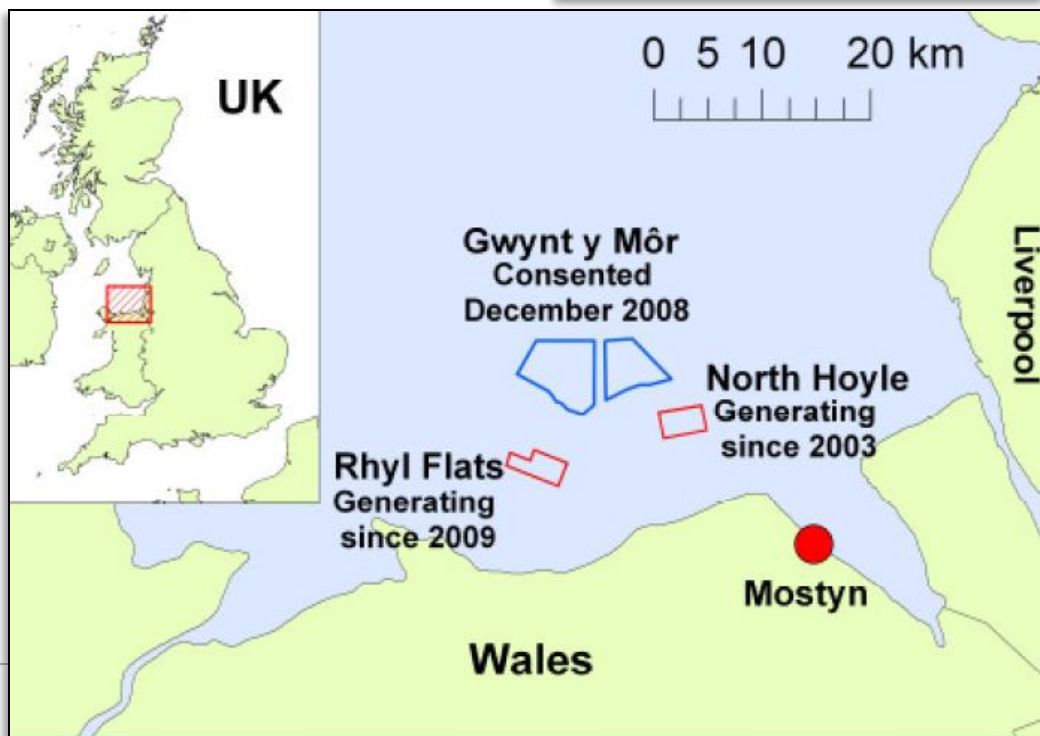

Meteo Dashboard 4 Irish Sea (Innogy)

RWE's offshore wind Farm in the Irish Sea:

- Rhyl Flats
- North Hoyle
- Gwynt y Môr

The Meteo Dashboard: is a decision support system for operation and maintenance activities of offshore wind farms, consisting of two components:

1. Forecasting System: a high-resolution hydrodynamic modelling system that provides forecasts of

1.0 waves, currents and water levels

2.0 vessel movements + human performance indicator

3.0 ...

at each wind turbine location in the offshore wind farm, on the basis of input meteo and boundary (wave) data from various sources.

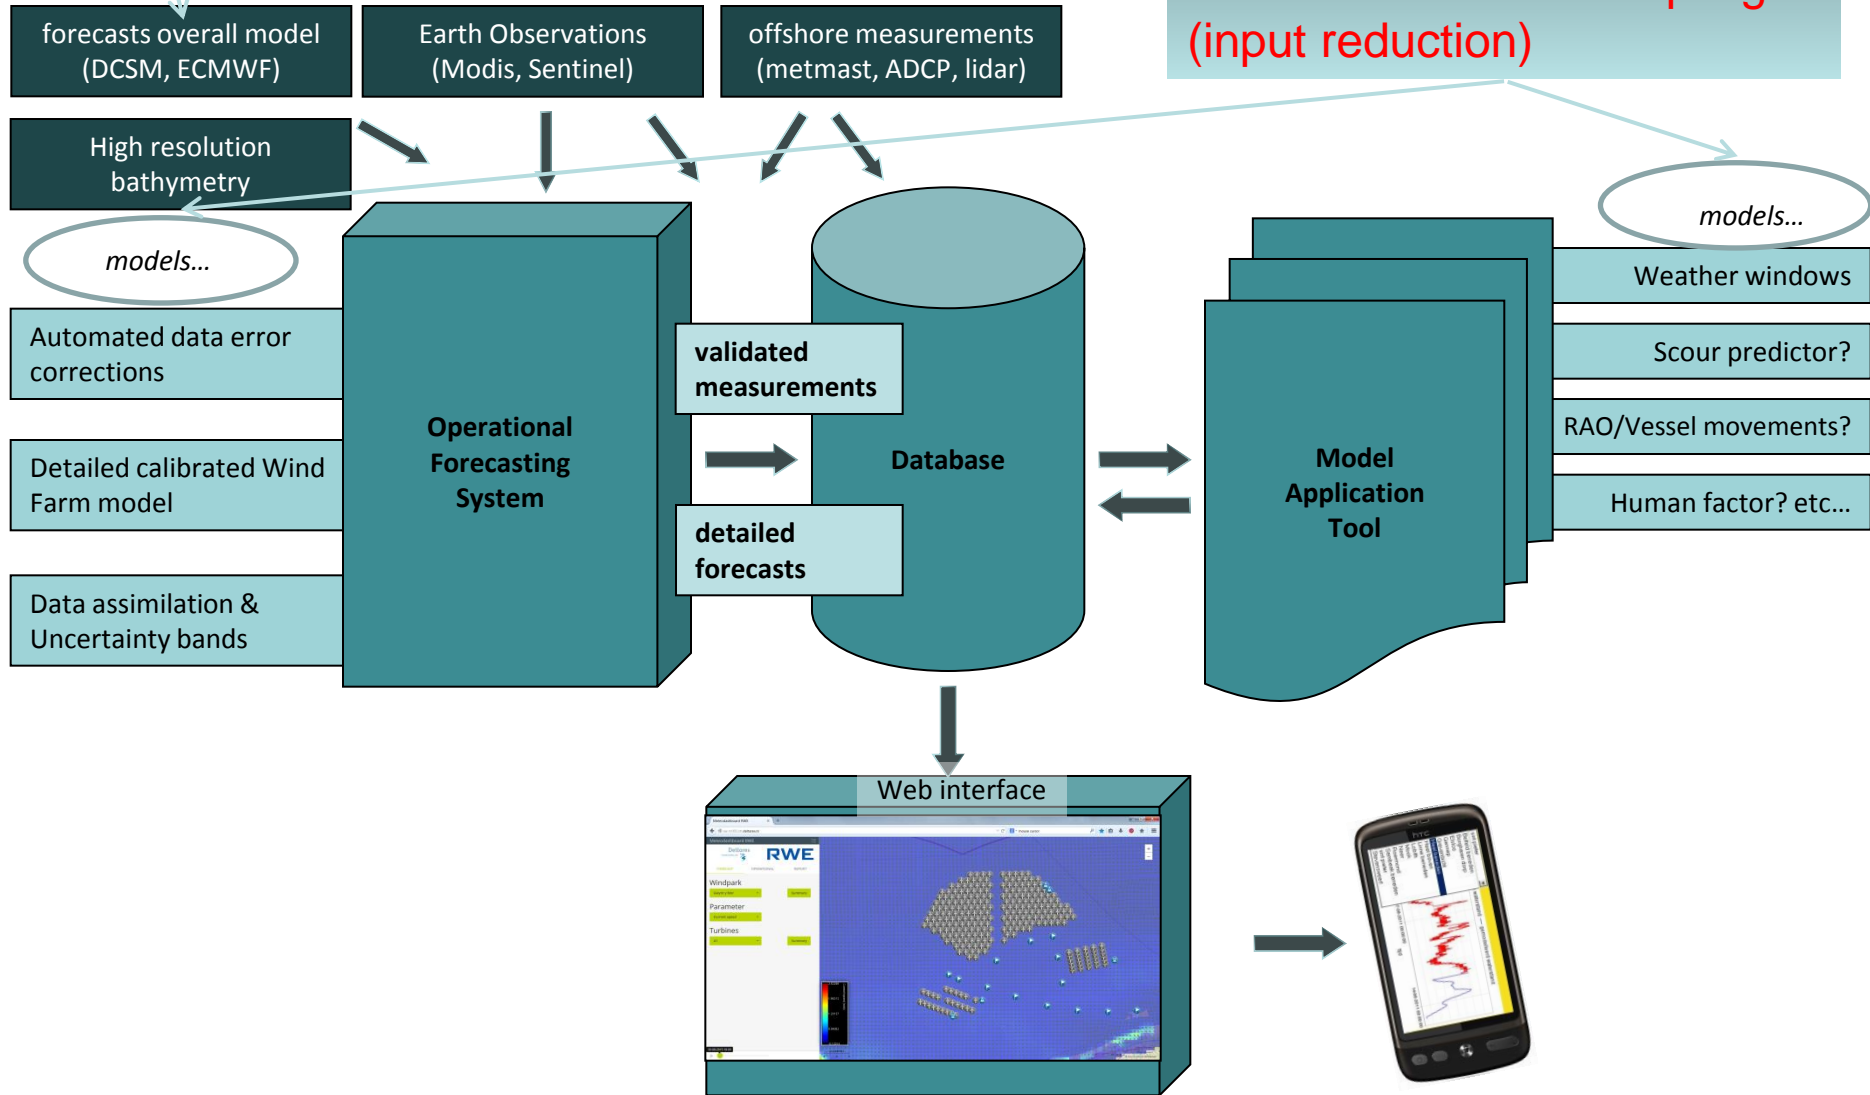

2. Dashboard: an integrated software system that collects, stores and presents all relevant measured and forecasted meteo- and hydrodynamic data, in support of the decision making process of installation and maintenance activities at the OWP.

Operational tab, O&M partly possible

Viewing measured and forecast time series

The screenshot displays the 'Meteodashboard RWE' web application. The browser address bar shows 'aw-tc003.xtr.deltares.nl'. The application interface includes a navigation menu with 'FORECAST', 'OPERATIONAL', and 'REPORT' tabs. The left sidebar is titled 'Windpark' and contains sections for 'Gwynt y Mor' (with a 'Summary' button), 'Parameter' (set to 'Wave height'), and 'Turbines' (set to 'A1' with a 'Summary' button). The main area features a map of the Gwynt-y-Mor wind farm, represented by a grid of turbine icons. A color scale legend for 'Significant wave height (m)' is visible, ranging from 0 (blue) to 1 (red). A 'Waveheight' graph for 'Gwynt-y-Mor wave rider' is overlaid on the map, showing three data series: 'Simulated significant wave height (m)' (light blue), 'Simulated significant wave height (m)' (orange), and 'Measured significant wave height (m)' (yellow). The graph's x-axis spans from 20-04 12:00 to 23-04 12:00, and the y-axis ranges from 0.10 to 0.55 meters. A vertical red line is positioned at 21-04 12:00. The bottom left corner shows a timestamp '20-04-2015 18:00' and the text 'EUROS for wind energy'. The bottom right corner includes the copyright notice '© OpenStreetMap contributors'.
